

TOURISM OPERATIONS MANAGEMENT SYSTEM

MASTER DEVELOPMENT PROMPT

Complete specification for **Excel backend + user-friendly frontend interface** for a small tourism company workflow tracker.

Item	Specification
Application	Tourism Operations Management System
Database	Microsoft Excel Workbook
Backend	Excel formulas, structured tables, VBA / Office Scripts if needed
Frontend	Simple user-friendly form-based interface for internal staff
Time Zone	Africa/Nairobi
Primary Branding	Clean, professional, tourism-inspired design
Workbook	Tourism Operations Management System
Core Purpose	Track the flow of every enquiry and booking through Sales, Reservations, Accounts and Operations

1. SYSTEM OVERVIEW

Build a professional, secure, simple and user-friendly **Tourism Operations Management System** for a small tourism company of about **5 staff members**. The system must be designed for **internal company use only** and should help the team understand what happens from the moment an enquiry is received until the holiday is successfully completed.

The system must track the full workflow of each client file as it moves through the company departments:

- **Sales Department** — receives enquiries, communicates with clients, prepares quotations and follows up
- **Reservations Department** — handles hotel bookings, flight bookings, transport bookings and supplier confirmations
- **Accounts Department** — handles supplier payments, client invoicing, payment tracking and financial status
- **Operations Department** — oversees the entire file, confirms service delivery and ensures the holiday runs smoothly

The system must focus on **process flow tracking**, not on unnecessary complexity. It should be compact, easy to use, and suitable for staff who are not technically advanced.

The system must help users answer the following questions clearly:

- Who received the enquiry?
- What stage is the file currently in?
- Which department is handling it now?
- What was done previously?
- What is the next action?
- Is the file delayed, pending, confirmed, paid, or completed?
- Who is responsible for the current action?

The system should allow staff to follow every enquiry from start to finish in a clear and organized way.

2. BUSINESS CONTEXT

The company is based in **Tanzania** and serves:

- Mid-age and older Kenyan and Tanzanian travellers
- Foreign nationals
- Leisure travellers
- Couples, families, private groups and corporate clients

The system must reflect real tourism workflow and should be practical for a small internal office. It must not look like a big enterprise system. It should feel light, neat and easy to maintain.

The system must be built to track the movement of each file across departments, including handovers and ownership changes. The owner of the system should have full control and may share it with the company for approval and use.

3. MAIN WORKFLOW

The workflow must follow this order:

1. Enquiry Received

2. A client enquiry is entered into the system.
3. Basic client details are captured.
4. The enquiry source is recorded.

5. Sales Stage

6. Sales team reviews the enquiry.
7. Sales prepares a quotation or itinerary.
8. Sales follows up with the client.

9. Booking Confirmation

10. If the client accepts the offer, the enquiry becomes a confirmed booking.

11. Status changes from enquiry to booking/confirmed.

12. Reservations Stage

13. Reservations team makes hotel, flight, and transport bookings.

14. Supplier confirmations are recorded.

15. Accounts Stage

16. Accounts processes supplier payments.

17. Invoice/payment details are captured.

18. Payment status is tracked.

19. Operations Stage

20. Operations oversees the trip delivery.

21. The team ensures the holiday runs smoothly.

22. Any issues, changes or service notes are recorded.

23. Completion / Archiving

24. After the trip is completed, the file is closed or archived.

25. The full history remains visible for future reference.

4. REQUIRED DATA FIELDS

The system must include at minimum the following fields for each enquiry/file:

- Date of inquiry
- Client name
- Country
- Email / contact
- Travel dates
- Number of pax
- Destination
- Stage
- Follow-up dates
- Status
- Source

- Estimated value

The system must also allow additional useful fields such as:

- Assigned staff member
 - Department currently responsible
 - Last updated date
 - Next action
 - Notes / remarks
 - File reference number
 - Booking confirmation number
 - Supplier notes
 - Payment status
 - Trip completion status
-

5. STAGE TRACKING

The system must clearly show the current stage of each file.

Examples of stages:

- New enquiry
- Quoting
- Follow-up
- Accepted
- Confirmed booking
- Reservations in progress
- Supplier booking completed
- Awaiting payment
- Paid
- Operations in progress
- Travel completed
- Closed
- Archived

The stage must make it easy to know whether the file is in **Sales, Reservations, Accounts or Operations**.

6. OWNERSHIP AND HANDOVER

The system must include a clear **ownership section** and **handover section**.

Ownership should show:

- Current owner
- Current department
- Date assigned
- Priority

- Responsible officer
- Escalation status

Handover should show:

- From department
- To department
- Handover date
- Reason for handover
- Handed by
- Handed to
- Remarks
- Acknowledgement status

This is important so that the company can see how each file moves from one department to another.

7. DIARY SECTION

Include a **diary / activity log** section in the workbook for internal tracking.

The diary should record:

- Date
- Time
- File reference
- Client name
- Activity performed
- Department involved
- Staff member
- Outcome
- Next action
- Follow-up date
- Remarks

The diary must provide a chronological history of all meaningful actions done on each file.

8. EXCEL WORKBOOK STRUCTURE

The workbook should contain separate sheets such as:

- Dashboard
- Enquiries
- Sales
- Reservations
- Accounts
- Operations
- Ownership
- Handover
- Diary

- Follow-Ups
- Reports
- Settings
- Archive

Each sheet should have clearly defined columns and should be easy to filter, sort and search.

9. DASHBOARD REQUIREMENTS

The dashboard must show simple high-level summaries such as:

- Total enquiries
- Enquiries in sales
- Files in reservations
- Files awaiting accounts action
- Files in operations
- Confirmed bookings
- Completed trips
- Overdue follow-ups
- Pending handovers
- Files by source
- Files by destination
- Estimated revenue

The dashboard should be very simple, clean and easy to understand at a glance.

10. USER INTERFACE REQUIREMENTS

The interface must be:

- Simple
- Clean
- Easy to navigate
- Mobile-friendly if possible
- Suitable for non-technical users
- Internal only
- Not crowded
- Not overly complex

Use clear labels and short instructions. Avoid technical language where possible.

The design should support fast entry of records and easy checking of file progress.

11. SEARCH, FILTERS AND REPORTING

The system must allow staff to:

- Search by client name
- Search by file reference
- Search by country
- Search by destination
- Search by stage
- Search by department
- Search by status
- Search by assigned staff
- Search by travel date range

The system should support reports such as:

- Daily enquiry report
 - Sales follow-up report
 - Reservations report
 - Accounts payment report
 - Operations completion report
 - Pending files report
 - Overdue follow-up report
 - Monthly summary report
-

12. WORKFLOW RULES

The system must follow these rules:

- Every enquiry must have a unique file reference
 - A file cannot skip stages without proper tracking
 - Every handover must be recorded
 - Every major action must be logged in the diary
 - Follow-up dates must be visible and easy to monitor
 - Status must be updated whenever the file changes stage
 - Closed and archived files must remain searchable
 - Internal users should only see what is necessary for their work
-

13. INTERNAL USE ONLY

This system is strictly for internal company use.

It must not be public-facing.

It must be designed so that the company owner can control access, review records and share the workbook with staff for approval and daily use.

14. OUTPUT REQUIRED FROM THE DEVELOPER

Act as a professional system development agency and produce a complete, practical and well-structured tourism management workflow system in Excel format.

Provide:

- Workbook structure
- Sheet-by-sheet column layout
- Data flow design
- Role-based workflow design
- Sample record structure
- Dashboard layout
- Diary structure
- Handover and ownership tracking design
- Status and stage definitions
- Suggested formulas or automation where needed
- A simple and user-friendly overall design

The final result should be a lightweight tourism operations tracker that focuses only on the flow of each enquiry through the company process from start to finish.

Important: The system should remain simple, clean and practical for a small team of 5 staff members.
